Training Development and Delivery Services

Capability Summary

Exceeds Expectations. Innovative. Tailored Designs.

Who We Are *...premiere services & solutions providers*

Spencer Cole, LLC Subject Matter Experts develop and deliver effective project management, program measurement and evaluation, organizational development, and technical (e.g. Aviation Operations, ATC) training programs. Organizations rely on our experienced trainers, training managers, instructional systems designers (ISD) and training developers to create customized courses to meet their organizational needs.

What We Do *...provide engineering solutions that exceed customer expectations.*

We work with our clients up-front to define their training needs and establish the training program, conduct research and analysis, determine content, implement the most effective learning tools, determine equipment and processes for training delivery and provide project management leadership throughout the life of the program. For those clients experiencing difficulty defining training requirement needs, we can design and develop courses from the basic requirements and provide a pilot course.

How We Do It *...with a commitment to delivering a quality product!*

We utilize the ADDIE process, Systems Approach to Training (SAT), TRADOC Regulation 350-70 among other processes and techniques. We also input the training into the Training Development Capability (TDC) database.
